M.D. Thesis Details :

Title : An Experimental Study Of Antithrombotic Activity Of Chitraka, Vidanga And Musta

Collaborative research with **National Institute of Nutrition**, (ICMR), Tarnaka, Hyderabad for M.D. Thesis titled “*An Experimental Study Of Antithrombotic Activity Of Chitraka, Vidanga And Musta*”

Abstract: Thrombosis is having complex etiology such as platelet aggregation, hyperlipidaemia, atherosclerosis and free radical damage, leading to high mortality and morbidity. In Ayurveda, in Charaka samhitha sutra sthana 26th chapter Charaka mentioned “*KATU RASA DRAVYAS*” possesses the antithrombotic activity. (*Shonitha Samghatam Bhinatthi*). Katu rasa dravyas also possesses the property of dilatation of vessels, (*Margan vivrunothi*), anti-atherosclerotic (*Lekhana*) property , lipolytic (*medohara*) property, which are useful in removing other predisposing factors for thrombosis. Hence Plumbago

zeylanica, Embelia ribes and Cyperus rotundus, which posses Katu Rasa in their classical form of administration were studied for their antithrombotic activity in animal model (New Zealand White rabbits). (1) Platelet aggregation, (2) Lipid profile (Total Cholesterol, LDL, HDL & Triglycerides) and (3) Antioxidant profile were estimated. The study is a combination of Ayurvedic knowledge with modern scientific tools like Platelet Aggregometer, UV-Vis Spectrophotometer.
